Patent No. US2002002715A1

FRENERAL INFORMATION:
APPLICANT: VIITANEN, PAUL V.
APPLICANT: WEYER, KNUT

APPLICANT: WAN DYK, DEBW

ITILE OF INVENTION: HIGH LEVEL PRODUCTION OF P-HYDROXYBENZOIC ACID
ITILE OF INVENTION: HIGH LEVEL PRODUCTION OF P-HYDROXYBENZOIC ACID
ITILE OF INVENTION: HIGH LEVEL PRODUCTION OF P-HYDROXYBENZOIC ACID
CURRENT PILICATION NUMBER: US/09/855,341

CURRENT FILING DATE: 2001-05-15

NUMBER OF SEQ ID NOS: 16

SEQ ID NO 3

LENGTH: 495
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Published\_Applications Mucleic Acid and Published\_Applications Amino Acid database searches now reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Mewly publications make up the Published\_Applications\_Mem databases. Older published

Searches run against Mucleic Acid Published Applications produce two sets of results, with the extensions rupbm (Published Applications NA Main) and .rnpbm (Published Applications Acid Published Applications produce two sets of results, with the extensions rapbm (Published Applications AA Main) and .rapbm (Published AA Main) and .rapbm

Xhol; cLET - Inoculated with a variety of disease response
elicitors. Plants exposed to 2,6 dichloroisonicotinic
acid, BTH, jasmonic acid, ethylene, fenthion, EIX,
okadaic acid, or systemin prior to tissue harvest. EcoRl
site was destroyed during cloning."
                                                                                                                                                                                                                                                                                                                                                                                                                                                          AW094091

EST287271 tomato mixed elicitor, BTI Lycopersicon esculentum cDNA clone cLET27A10, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Lycopersicon esculentum (Solanum lycopersicum)
Lycopersicon esculentum
Eukaryota, Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicotyledons;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicotyledons;
asterida; lamiida; Solanalea; Solanaceae; Solanum; Lycopersicon.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6605709

GENERAL INFORMATION:
APPLICANT: GARY BRETON

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL

TITLE OF INVENTION: DAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709 1002-001

CURRENT APPLICATION NUMBER: US/09/543,681A

CURRENT FILING DATE: 1999-04-05

PRIOR PEPLICATION NUMBER: US 60/128,706

PRIOR FILING DATE: 1999-04-09

NUMBER OF SEQ ID NOS: 8344
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          146 ArgArgSerArgLeuArgLeuSerGlyLysProLeuLeuThrGluLeuPheLeuPro 165

Sequence 7361, Application US/09252991A
Sequence 7361, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT FILING DATE: 1099-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR PILING DATE: 1998-02-18
PRIOR PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 7351
